Nu Talent Management System (Nu -TMS)

Workflow Document

Project Executive Summary

Nu Logic has around 15 customers and close to 250 employees, including contractors. For any organization to be running efficiently, the first data point is to know the project allocation details of the employees. This includes the client and project they are working on, percentage allocation to each of the projects, start date, end date, location of the project and their role. Today all of these are partly defined within the project level only.

The objective of this project is to create an application, Nu TMS, which will be used for allocation process and know the overall resource utilization. The application would be web based and have various roles. Each role has a set of different functionalities.

- Project managers would be able to add/update/remove the team members to their projects. They can define the start date and end of the allocation of the team members.
- Management teams will be able to view the overall allocation of the resources and their utilization across the company. The allocation dates can be used to plan resources for any future requirements in the pipeline.
- Team members will be able to view their allocation to the projects.
- The application admin privileges are provided to add the project and employee details to the application and define the roles of the users.

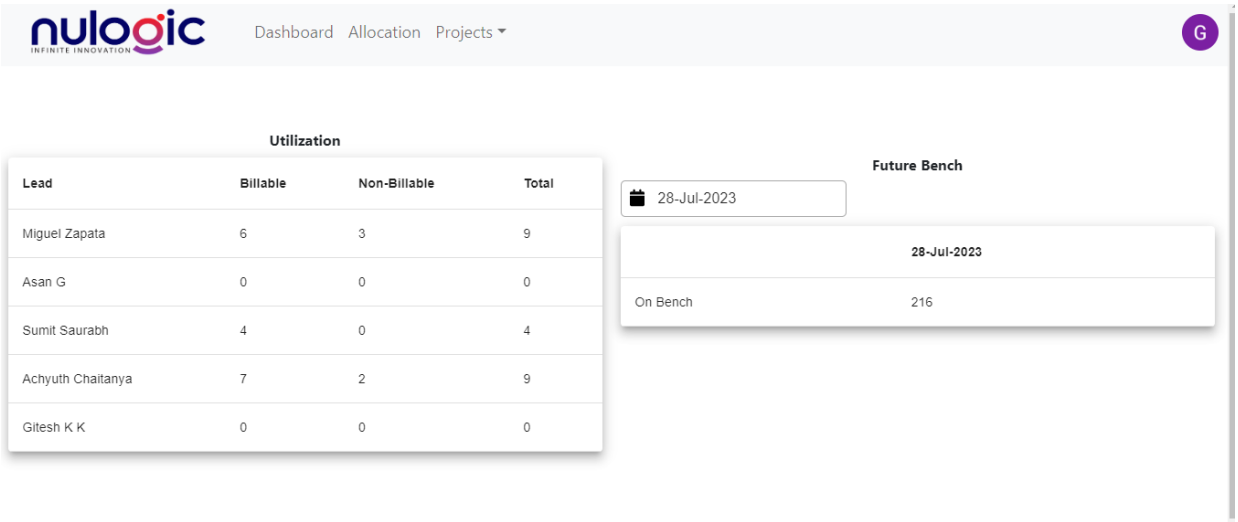
- There are 3 levels of access
  - Senior management
  - Project leader
  - Team members

Senior management

Dashboard - only accessible to CEO, VP, Operations Head, HR and Delivery Leads



Dashboard details :

1. **Utilization:** At Delivery lead level, the split of employees who are billable and non-billable.
    - Clicking on the numbers shows the split at project level and also further drill down to the list of employees

2. **Bench Report** : Displays the number of employees in bench at a selected date
    - Clicking on the value shows the list of employees in bench on the selected date
    - This report can be downloaded

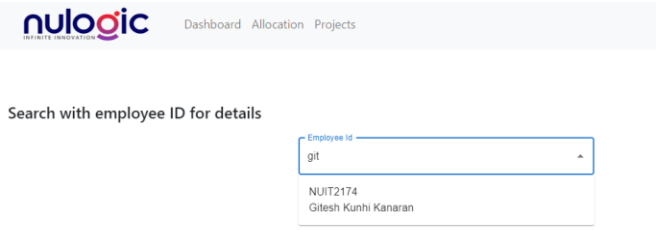
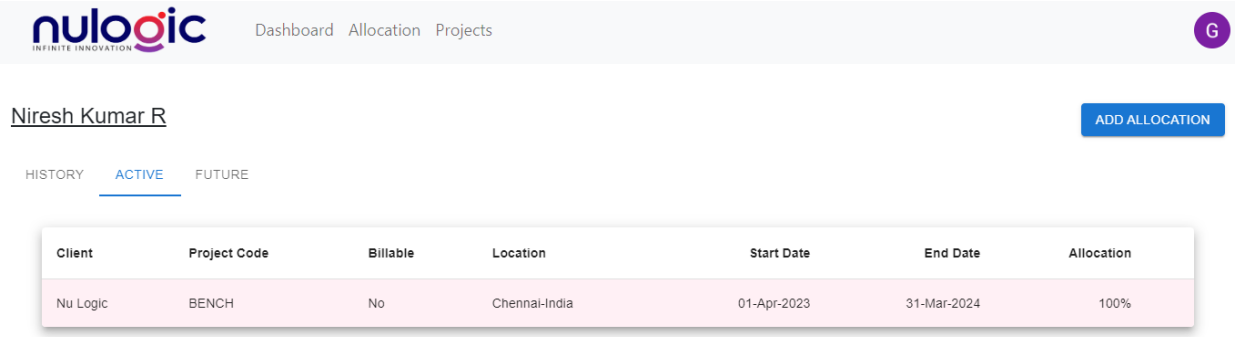
Allocation

Under allocation tab, at employee level, new existing allocations can be viewed, edited & deleted and new allocations can be added by ‘project leaders’ and higher roles

- In Allocation screen, select an employee by searching with name or id





- By default, the Active allocation tab is displayed with the current allocation details.
- This shows any active project allocations and the remaining bench allocations for the active assignments.
- The other 2 tabs show the allocation history and future allocations (if any) for the selected employee
- When an employee is newly added to the TMS application, by default allocation is provided for the current financial year to bench.
- The bench allocations are not visible for Future.

Adding New Allocation

- The project manager can allocate the employee to projects only which is assigned to.
- Deliver Leads and Senior management can allocate the employee against any projects.
- To add a new allocation for the selected employee, click on add allocation button, and a pop up will appear.
- Select the dates for which the allocation has to be created.
- Once the date is selected, it will display the availability of the employee for the selected date range.
- The client, project and percentage of allocation (equal to or less than the availability) can be filled in and employee can be allocated.
